EXPERIENCE

Secura, Amsterdam

March 2025 - Oct 2025

Project Intern

- Developing a CI/CD pipeline to automate payload compilation and obfuscation for internal penetration testing.
- Researching obfuscation techniques and EDR evasion strategies for .NET tools.
- Implementing custom scripts (Python, Bash, PowerShell) for automated payload processing.
- Leveraging Docker and containerization to standardise the build and testing environments.
- Designing a scalable architecture with encryption and obfuscation for enhanced stealth.
- Collaborating with the Red Team to refine pipeline features and document best practices.

Metal Morphosis, Gelderland

November 2023 - April 2025

Software Developer

- Leading the conversion of a 16-bit DOS program to a 64-bit Windows application, ensuring compatibility and modernisation for the company's operational needs.
- Utilising the QT framework and C++ to rewrite and optimise legacy C code, enhancing performance and usability on modern operating systems.
- Handling the entire development lifecycle independently, including requirement analysis, coding, testing, and deployment.
- Ensuring code maintainability and scalability by following modern software engineering practices and structuring the application for future enhancements.
- Planning to collaborate with cross-functional teams and contribute to technical documentation post-project completion.

TNO, The Hague

August 2024 - February 2025

Research Intern

- Conducting research on developing a cybersecurity knowledge graph to streamline compliance processes by mapping various cybersecurity frameworks and standards such as IEC 62443, NIS 2, ISO/IEC 27002:2022, and NIST SP 800-53.
- Performing requirements analysis and framework mapping to identify overlaps, dependencies, and gaps among different cybersecurity standards and regulations.
- Designing and implementing an ontology-based knowledge graph using OWL and RDF technologies to represent the relationships between advisory items, controls, and regulatory requirements.
- Developing Python-based data extraction pipelines using libraries such as PyMuPDF and Pandas to parse cybersecurity documents and extract relevant compliance data for integration into the knowledge graph.
- Evaluating the use of Large Language Models (LLMs) to automate data extraction and cleaning processes, comparing LLM-based methods with traditional scripting approaches for accuracy and efficiency.
- Collaborating with supervisors and cybersecurity experts to validate the accuracy and usability of the developed knowledge graph for practical industry applications.
- Building a web-based tool using React and Flask to provide an interactive interface for navigating compliance requirements, querying relationships using SPARQL, and visualising the knowledge graph using WebVOWL. - Conducting experiments to assess the efficiency of manual vs. automated data processing techniques, with a focus on improving standardisation, data validation, and compliance reporting.
- Exploring future enhancements such as real-time updates, cross-referencing automation, and compliance scoring to improve the tool's scalability and adaptability for cybersecurity professionals.

KEMURI Technology, Bengaluru

January 2023 - May 2023

System Engineer

- Designed, implemented, and optimised complex IT infrastructures at Kemuri Technology, ensuring seamless integration of

hardware and software components.

- Managed and troubleshoot diverse systems, networks, and servers, delivering reliable performance and operational efficiency.
- Proactively identified technology gaps and implemented innovative solutions to enhance system functionality and security, aligning with Kemuri Technology's organisational objectives.

EDUCATION

APJ Abdul Kalam Technological University

January 2018 - December 2022

Bachelor of Technology in Computer Science

- Activities & Societies: Founder - Official CTF Team
- Done Multiple Internships, Certifications, and also runs an Ethical Hacking Community under the ACM Student Chapter and a CTF Team as well.

Radboud University

August 2023 - February 2026

Master's degree, Cybersecurity
