Professional Summary

Software Developer and Cybersecurity master's student with experience building secure software, automation pipelines, and cybersecurity research tools. Skilled in C++, Qt, Python, Bash, PowerShell, Docker, React, Flask, RDF/OWL, and SPARQL. Experienced in modernising legacy applications, developing CI/CD workflows, automating data extraction, and building web-based tools for cybersecurity compliance and knowledge graph visualisation.

Technical Skills

Languages	C++, C, Python, Bash, PowerShell, JavaScript
Frameworks & Tools	Qt, React, Flask, Docker, Git, CI/CD, Pandas, PyMuPDF
Cybersecurity	Penetration testing support, payload automation, obfuscation research, EDR evasion research, compliance mapping
Data & Semantics	RDF, OWL, SPARQL, ontology modelling, knowledge graphs, WebVOWL
Systems	Windows application development, legacy software modernisation, Linux scripting, containerised build environments

Professional Experience

Bureau Veritas Cybersecurity (Formerly Secura)

Project Intern

Amsterdam, Netherlands

Mar 2025 – Oct 2025

- Developed a CI/CD pipeline to automate payload compilation and obfuscation for internal penetration testing workflows.
- Researched obfuscation techniques and EDR evasion strategies for .NET-based security tools.
- Implemented automation scripts using Python, Bash, and PowerShell for payload processing and build orchestration.
- Used Docker and containerisation to standardise build and testing environments.
- Designed a scalable pipeline architecture incorporating encryption and obfuscation techniques for internal Red Team use cases.
- Collaborated with Red Team members to refine pipeline features and document technical best practices.

Metal Morphosis

Software Developer

Gelderland, Netherlands

Nov 2023 – Apr 2025

- Led the conversion of a 16-bit DOS program into a 64-bit Windows application to support modern operational requirements.
- Rewrote and optimised legacy C code using C++ and the Qt framework, improving maintainability and usability on modern systems.
- Managed the full development lifecycle independently, including requirements analysis, development, testing, and deployment.
- Structured the application for future scalability and maintainability using modern software engineering practices.
- Prepared technical documentation to support future development and cross-functional collaboration.

TNO

Research Intern

The Hague, Netherlands

Aug 2024 – Feb 2025

- Conducted research on a cybersecurity knowledge graph to streamline compliance mapping across IEC 62443, NIS 2, ISO/IEC 27002:2022, and NIST SP 800-53.
- Designed and implemented an ontology-based knowledge graph using OWL and RDF to represent relationships between controls, advisory items, and regulatory requirements.

- Built Python-based data extraction pipelines using PyMuPDF and Pandas to parse cybersecurity documents and extract compliance data.
- Evaluated Large Language Models for automated extraction and cleaning of cybersecurity compliance data.
- Developed a web-based tool using React and Flask for querying compliance relationships with SPARQL and visualising knowledge graph structures using WebVOWL.
- Worked with supervisors and cybersecurity experts to validate the accuracy and practical usability of the knowledge graph.

KEMURI Technology

System Engineer

Bengaluru, India

Jan 2023 – May 2023

- Designed, implemented, and optimised IT infrastructure involving hardware and software components.
- Managed and troubleshoot systems, networks, and servers to support reliable performance and operational efficiency.
- Identified technology gaps and implemented solutions to improve system functionality and security.

Education

Radboud University

Master's Degree in Cybersecurity

Nijmegen, Netherlands

Aug 2023 – Apr 2026

APJ Abdul Kalam Technological University

Bachelor of Technology in Computer Science

India

Jan 2018 – Dec 2022

- Founder of the official CTF team.
- Organised ethical hacking and cybersecurity community activities under the ACM Student Chapter.

Selected Projects

Legacy DOS-to-Windows Application Modernisation

C++, Qt

- Converted a legacy 16-bit DOS application into a 64-bit Windows application using C++ and Qt.
- Improved code structure, maintainability, and compatibility with modern Windows environments.

Cybersecurity Compliance Knowledge Graph

Python, RDF, OWL, SPARQL, React, Flask

- Built an ontology-based cybersecurity compliance knowledge graph connecting requirements across multiple standards and regulations.
- Developed extraction pipelines and a web interface for querying, visualising, and navigating compliance relationships.

Payload Automation and Obfuscation Pipeline

Python, Bash, PowerShell, Docker, CI/CD

- Developed automation workflows for payload compilation, processing, and obfuscation in an internal penetration testing context.
- Standardised build and test environments using Docker and CI/CD practices.

Additional Information

- Interested in secure software development, cybersecurity tooling, automation, application modernisation, and compliance engineering.
- Experience working independently on full-cycle development projects and collaborating with cybersecurity research and Red Team stakeholders.
